# Compost

## Fence Enclosure

Heavy gauge wire fencing is inexpensive and an easy, do-it-yourself project, though this method takes more time than our other examples. Place your enclosure in a shady spot and simply add your debris, moisten, leave it alone, and watch it break down. Water weekly if it doesn't rain. You can speed up the process by turning the pile. To do this, lift the fence and place it on the ground in adjacent location. Starting at the top of the pile and working down, fork or shovel the pile back into the bin.
